

Solution: - Created an application which supports Windows 8 or (above) operating system and is programmed in Java, with a bash file, which would give the user a chance to customize the connectivity period in internet and change the IP (internet protocol) address as the time interval ends, until the user closes the application, internet protocol (IP) will be changing with the mentioned time intervals. This was just addressed considering a small organization, like classrooms of college and reducing the data loss even if being attacked.
